KeyMacro is a special utility developed to help you create macros in the most professional way, which can save you a lot of time and avoid many problems. You can activate macros automatically by using KeyMacro without any additional clicks or even having to press any key on your keyboard. KeyMacro automatically starts at the active window, and after waiting for a period of time, it will automatically repeat the same action. This utility is the only program that is able to record macros on the fly. You can even record your own macros without any software. KeyMacro's keyboard shortcuts are specifically designed for a wide range of operations, so you will be able to speed up the process of creating macros by using the most efficient commands. Main features KeyMacro can record macros, play them back and edit or delete them. You can record the status of all windows by holding the Shift key when clicking on a window's title bar. You can also record your actions on the desktop and system tray. KeyMacro supports the Windows 7 taskbar and Ribbon interface, and you can edit your own keyboard shortcuts. KeyMacro supports the creation of macros for almost all programs such as Microsoft Excel, Access, Notepad, Internet Explorer, Firefox, Thunderbird, etc. You can record macros for any application that supports the registry. You can record a macro for the currently active window. You can specify a custom key for any application that has its own custom key for the window's title bar. If you have multiple applications open at once, KeyMacro will automatically start at the active window. After starting, KeyMacro will automatically repeat the last action. When the application does not support recording macros, KeyMacro will instead record the keyboard shortcuts for the application. KeyMacro has a special Windows 7 keyboard for many applications such as Internet Explorer, Outlook Express, and Firefox. You can create shortcut commands to start and stop recording, open the editor, go to the current window, and more. KeyMacro has a built-in XML editor where you can write and edit a list of macros. You can export the macros in various formats including the following: - JSON - JSON is a lightweight data interchange format that is commonly used for data interchange in web services and RESTFul APIs. - XLS - The Excel spreadsheet. - HTML - HTML is a language used to create documents, typically web pages. - CSV - CSV 77a5ca646e
