MORE: FIFA Ultimate Team 2017 changes, updates, release date, trailer For first time, FIFA 22 introduces the ability to be more creative and more effective on the ball with a range of ball-juggling techniques. Players now have the ability to manoeuvre the ball while sitting down. Players can also use a string of animated shots to put the ball into areas they couldn't reach before. Separated user views and a wider range of right-to-left dribble moves open up more tactical options for attacking players. Players also have a smoother range of passes. Players can now perform fake-shots more effectively while creating space to score. Furthermore, players will feel more confident on the ball, having the ability to pass it on the ground, utilising a new Passing Modifier. This means passing is more effective, players will pass with more confidence, and the player will also collect the ball with less chance of it squirting away. The new skills also mean players can now run up and perform a specific technique on the ball as well as pass into space before running with the ball in a different direction. This adds a new dimension to player creation, bringing the world of FIFA Ultimate Team to life, and giving fans more creative control than ever before. The planet is protected by a spaceship that is always at least 80 years away, ready to beam the life-supporting substance back if the planet should die. The system is monitored by a ship-killer that is also always at least 80 years away, observing the planet carefully. The planet's orbit is unstable, and when it is too close or too far the ship-killer comes through the artificial wormhole at a certain range.
