To take your image editing skills one step further, I recommend downloading one or more of the image-editing programs mentioned in the section "Photography Software," where each image-editing program is given its own individual review. These programs are especially helpful for those who want to get to know an image-editing program better before attempting Photoshop. Finding Photoshop on a Mac If you use a Mac, Photoshop is available at no charge through the Mac App Store at . Just type "Photoshop" and either "Professional" or "Creative" in the search box. If you already have an Adobe Creative Suite (CS), you can download Photoshop CS6 from the Adobe Creative Suite 6 (CS6) download page (www.adobe.com/creativecloud/sdk/pages/download.html) for free. You can also download the images you create in that Photoshop. An Adobe CS6 software download costs \$49 (US). An Adobe CS5 software download costs \$49 (US). To download from the Mac App Store, go to the CS6 download page and click Downloads?Software. Some Photoshop CS6 programs require CS4 for compatible applications, which you can get from the CS4 download page (www.adobe.com/creativecloud/sdk/pages/download.html). After you install Photoshop CS4, you must close all other Photoshop programs, including Adobe Bridge CS4, so that Photoshop can access and use the standard libraries and plug-ins that it needs for its usage. If you don't do this, Photoshop might become unstable. Finding Photoshop on a Windows PC After installing Photoshop CS6, you have many ways to access the program. You can right-click the Photoshop icon in the program's shortcut menu or on the Start menu and choose Explore (or press Ctrl+K). Another option is to double-click the image, which then places Photoshop in your taskbar, and then right-click the image or Photoshop again and choose Explore. I've tried to avoid using the "right-click here" method because I find that it's often necessary to use the keyboard in Windows to control the program, and keyboard shortcuts are usually covered by the buttons on a mouse. Adobe gives you several ways to purchase a license for Photoshop. First, you can purchase it from the Adobe website (

Q: c++ How to perform serial port input? this might be a stupid question but i am very new to c++. What i have to do is to take data from SerialPort. I wrote a code with WinSerial.h from SeparatedFromGithub and i can connect and send data and it also works. But i need to get the data from SerialPort and put it into a vector as a float value. I want to put it as a float value because the software has to do further processing. What i already have is: // Try to open the port. // If it fails exit the program. // If it succeeds throw serial_port_work if(serial_port_work == 0) { cout << temp_vector; Also i was getting the time from the serial port and i want to put it into a variable like

Brushes Brushes are among the most important tools in Photoshop. They can be used for various effects, including compositing, painting, erasing and retouching images.
